Goal: To build a Python-based automated bot to perform tasks as specified below.

Details: You are required to build an automated python bot that can perform the following tasks:

- Login to a Facebook account given ID and Password.
- Add 1 friend from the same location as the location of the ID.
- Update account status (text based).
- Open timeline of a random friend and comment on the most recent post.

Notes:

1. You can either use Selenium or any other library of your choice to implement the task.
2. You are **required to submit a README** file along with your script with instructions on how to use the script.
3. You are required to add the code to a GitHub repo and share the link of the repo.
4. Submit the assignment on: https://forms.gle/6YmkgspmjrKymHSS6
5. The deadline for submission is **11:59:59PM, 11th Feb 2021**.
